Lesson 4-4 · Period 1 · Do Now

Name: _____ Period: _____ Date: _____

Do Now

CRITIQUE EXPLAIN Teo and Evander find the following exercise in their homework: $(1)/(2) + (1)/(3) + (1)/(9)$

[IMAGE: A tablet displaying the math problem $1/2 + 1/3 + 1/9$]

- A. Teo claims that a common denominator of the sum is $2 + 3 + 9 = 14$. Evander claims that it is $2 \cdot 3 \cdot 9 = 54$. Is either student correct? Explain why or why not.
- B. Find the sum, explaining the method you use.
- C. **Construct Arguments** Timothy states that the quickest way to find the sum of any two fractions with unlike denominators is to multiply their denominators to find a common denominator, and then rewrite each fraction with that denominator. Do you agree?
