CRITIQUE EXPLAIN

Nicky and Tavon used different methods to solve the equation $(1)/(2)x + (2)/(5) = (9)/(10)$.

TABLE: Nicky | Tavon $(1)/(2)x + (2)/(5) = (9)/(10)$ | $(1)/(2)x + (2)/(5) = (9)/(10)$ pt] $(1)/(2)x = (9)/(10) - (2)/(5)$ | $10((1)/(2)x + (2)/(5) = (9)/(10))$ pt] $(1)/(2)x = (5)/(10)$ | $5x + 4 = 9$ pt] $x = 1$ | $5x = 5$ pt] | $x = 1$ pt] The solution is 1. | The solution is 1. END_{TABLE}

- A. Explain the different strategies that Nicky and Tavon used and the advantages or disadvantages of each.
- B. Did Nicky use a correct method to solve the equation? Did Tavon?
- C. Use Structure Why might Tavon have chosen to multiply both sides of the equation by 10? Could he have used another number? Explain.
