teacher models

Application Rules for Inverse Variation

1. Identify two varying quantities and their constant PRODUCT k .
2. Compute k from one given pair.
3. Write the equation $y = k/x$ (rename variables to fit).
4. Solve for the unknown.

Example (bouzouki string): length s varies inversely with frequency f .

- 26-inch string $\rightarrow 329.63$ cycles/sec $\rightarrow k = 8,570.38$
- 13-inch string $\rightarrow f = 8,570.38/13 = 659.26$ cycles/sec
